

To facilitate management of automated banking machines and **reduce operating costs**, MX ATM offers **centralized management of all types of ATM** : multi-vendor, multi-lingual, multi-currency and for **any payment instrument** (debit card, prepaid, e-wallet, m-wallet, cardless and many others), both domestic and **international** via Visa, MasterCard, China UnionPay and many others.

It offers high added-value services for customers such as **invoice and tax payments**, **money transfer**, **purchase of transport tickets** but also **self-service banking** (cash deposit, check request, printing, and many others, see diagram below) and delivering **customized** advertising messages **to the customer's profile** such as announcing a new product or a temporary promotion. The possible operations can be parameterized according to the profile of the holder and the selected means of payment.

Finally, in order to **minimize operator movements** and provide an **optimum availability** of 99.98% 24/7/365 of automatic teller machines, MX Plus enables **real-time remote monitoring and remote control** of the entire parc. It also facilitates administrative tasks through integrated inventory and maintenance management, with the ability to define parc groups based on the size of the transaction volume, communication protocol, constructor, application, city or geographic region or by a subsidiary, branch or supervisor.
