

MX Plus offers a reliable and definitive solution to branch queues thanks to a wide range of **electronic payment services for contraventions, taxes and invoices of all kinds**: water, electricity, telephone, television subscription. These payments can be made on **several channels** (ATM, POS, mobile, internet and many others) with flexible payment methods allowing **the inclusion of unbanked customers**: cash, check, bank transfer and payment cards of any kind (debit, prepaid, e-wallet, m-wallet, and many others). Once the client is authenticated by password or **strong authentication**, he/she can choose the invoice to be set either in a pre-parameterized list or enter the invoice number manually or by bar code reading. The **confirmation of payment** can be sent by sms, email or ticket printing (on ATM / POS).

It is also possible to **recharge your prepaid accounts**: *phone card, prepaid payment card but also internet or television*. Several **recharge formulas** can be proposed, with advances of payment and subscription to a program of automatic reloading. The payer can set its own payment **limits**. Recharge codes are available even in **disconnected** mode.

The application significantly reduces **collection costs** through automated interfaces with the originators of invoices and prepaid accounts. The **costs of billing and distribution** of charging cards are also **reduced** thanks to the dematerialization of exchanges and confirmation tickets. Finally, there is no longer any risk of **stock-outs** of recharge cards on the market.
