MX+ Switch

MX Switch allows electronic transactions to be routed between payment acquirers, electronic banking centers and domestic and international issuing institutions via Visa, MasterCard, China UnionPay and many other standard interfaces. It is compatible with all types of transactions (withdrawal, payment, transfer of money, and many others), any channel (ATM, POS, mobile phone and many others), any payment instrument (debit card, prepaid, e-wallet, m-wallet, and many others).

It can handle large volumes of transactions through advanced load distribution and parallelism algorithms.

Finally, it offers a centralized monitoring interface allowing to monitor and control all the lines on the same screen and to notify the operator automatically in case of anomaly.
