

Case study– Ministry of Transport and Logistics of Morocco Biometric Driving License and Vehicle Registration Program

Context

In 2007, the Kingdom of Morocco has selected M2M Group to issue and manage biometric driving licenses and vehicle registration cards, all over the country.

This large scale dematerialization project is set up to issue over **13 million cards** (multi-applicative contactless smart cards). Replacement of all paper based documents by secure e-documents was achieved by 2013.

Objectives

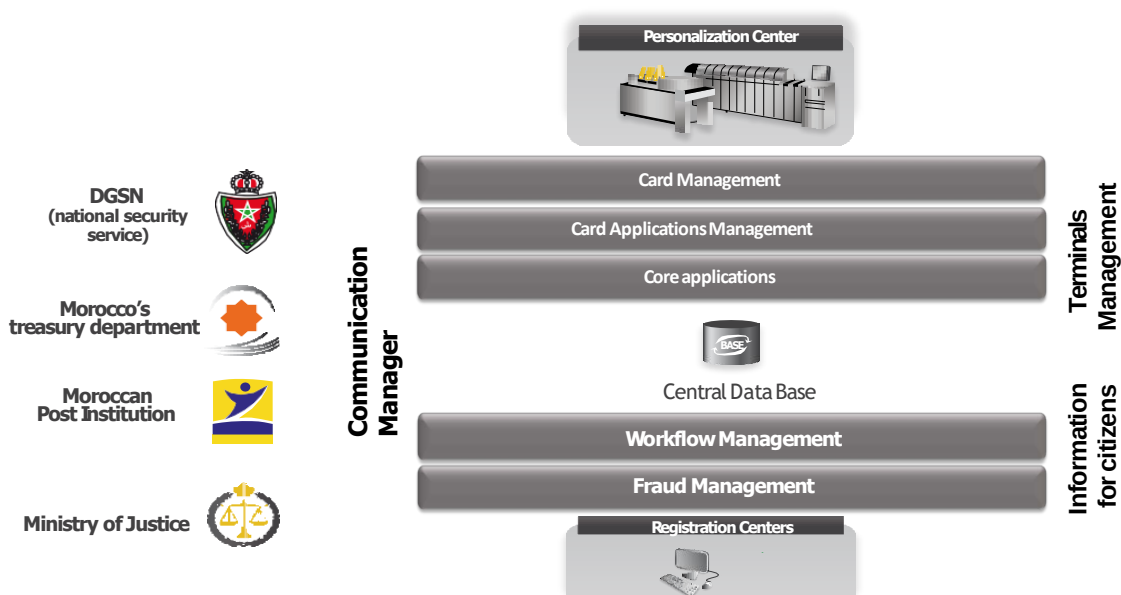

- To provide better public services to citizens (drivers and vehicle owners) and promote the use of IT technology.
- To enhance road safety by establishing a real monitoring of infractions through the digital record on the driver's license and the vehicle registration card.

M2M Group's Response

The concession contract was signed with the Moroccan Ministry of Transport in February 2007. Within six months, the system went into production in its initial version. The first registration center in the Moroccan capital, Rabat, began issuing the first e-driving licenses and registration cards. Six months later, the system is 100% deployed nationwide. In 2008, the second phase of the project is launched,

The second phase covers the widespread replacement of existing physical documents with digital ones. This stage covers the issuing of more than 8 million cards. Every month, more than 250,000 secure e-documents are issued and delivered to citizens. In October 2010, a new road traffic law came into effect. In addition to the preventive measure which consists in setting up applications such as the "Points System" and the record of roadworthiness tests for vehicles.

The system implemented by M2M has also served to dematerialize the processes between the Ministry and many of its partners, such as customs, the national treasury, dealerships, the tax department, etc. The e-documents have also enabled citizens to access a wide range of services directly connected to their daily lives.

Solution key components

- A full management system of cards and applications
- Central site with a backup center
- Enrollment and Issuance Centers
- Secure personalization center with banking standards
- Highly secure, multi-application contactless cards
- Mobile stations
- Mobile terminals for identity documents verification
- Full range of services: Implementation, training, operating, management, maintenance, and skills transfer.

About M2M Group

At the heart of the evolution of the digital world, M2M Group is a global group operating for over 30 years in the fields of dematerialization and share management, flows and secure electronic services. M2M Group helps banks, governments, transport operators, universities and companies accelerate their digital transformation and offer their customers digital services that combine innovation, conviviality and trust. M2M Group is listed on the Casablanca Stock Exchange.
