

MXtransport

m2m
group

Introduction

MX Transport is an end-to-end solution that provides governments with highly secure certificates and national identification documents with the purpose of dematerializing processes and bringing convenience to public administrations as well as businesses and citizens. This will improve quality of service, reduce risks and increase operational efficiency.

Citizens and professionals can benefit from enhanced and open interactions with the transport authorities thanks to quick, easy and secure processes:

- Issuance of identification documents
- Single point of access to online requests for citizens and governments
- Full life-cycle management of IDs

MX Transport provides electronic certificates to citizens

E-transport securities

- Driving license
- Vehicle registration
- Passenger license
- Taxi license
- All types of licenses

And other certificates for:

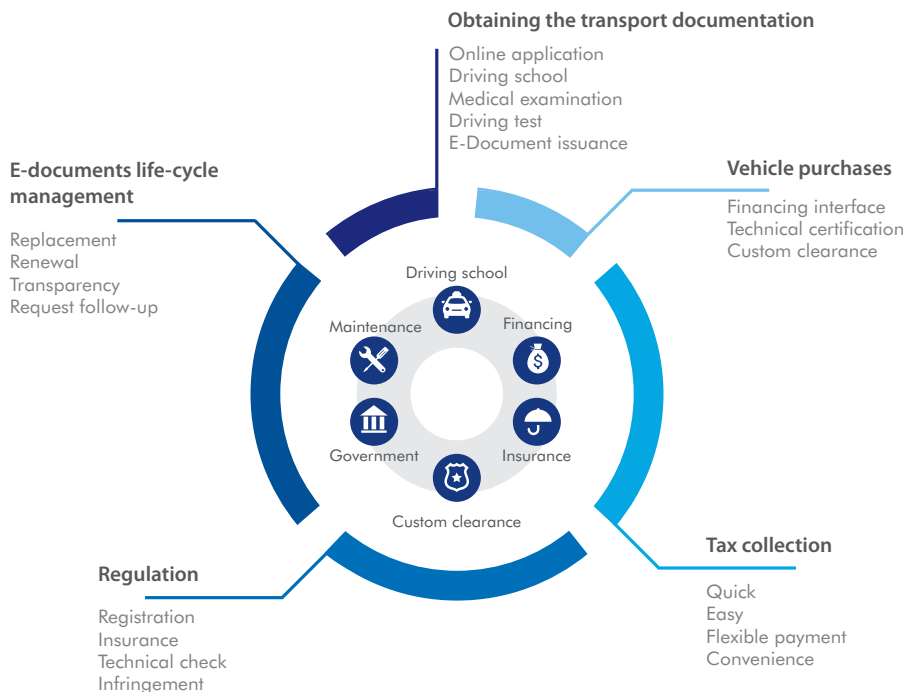

- Public and private transport
- Suburban transport
- Transport of goods

Global platform

Services

MX Transport provides a wide range of online services to governments, professionals and citizens

- **Government services**

- Transport document issuance
- Tax collection
- Management of infringements
- Online services

- **Professional services**

- Vehicle custom clearance
- Driving school management
- Registration center management
- Technical control center management
- Services to automotive dealers
- Financing companies, insurance, rental companies

- **Citizens services**

- Adaptive portal: online document request
- Additional services: follow-up of applications, electronic payment, points balance

| Key features

Fingerprint authentication

Allow easy access and fast identification by providing drivers fingerprint authentication. Government no longer needs to process additional documents, it can automatically check the identity of a citizen using chip-based biometrics data

Online services

Let citizens access online services anywhere, anytime. These services are available 7 days a week/24 hours per day. Our goal is to make citizens' experience more convenient while preserving the privacy of personal information.

Data mining

Get accurate and complete data on citizens and make roads and cities safer. This solution includes fines management, point management and provides a follow-up on the driver's history.

Securing communication

Protect your drivers' data by securing exchanges of data. We are committed to providing citizens with a smart card that securely stores the driver's data and protects citizens against identity theft.

Roadside check

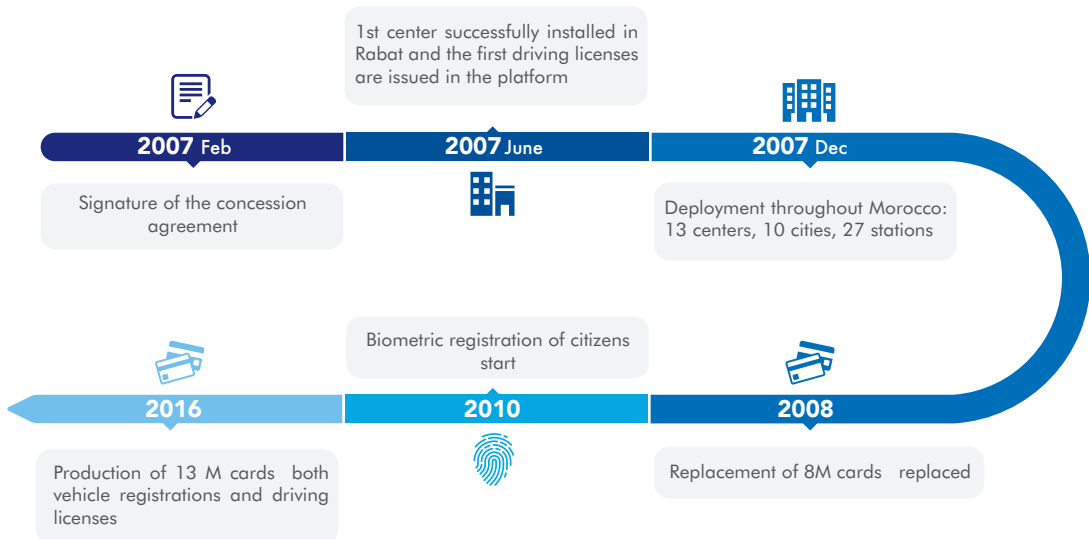

Verify the identity of your drivers. For police forces or other third parties wishing to identify the driver of a vehicle and its rights as well as provide an effective point management system of licenses and registration cards.

| Benefits

- Provides effective means and measures to help prevent fraud and theft
- Provides a better service to citizens and offer clearer guidance to governments
- Has visibility on the vehicle fleet
- Increases revenues through the collection system of infractions
- Delivers value-added services: online minutes of proceedings

Case Study: Morocco

In 2007, the Ministry of Equipment and Transport of Morocco has selected M2M group as its unique provider of driving licenses and vehicle registrations all over the country. Our E-gov web portal provides full range of services including citizens authentication, document requests, electronic documents, appointment booking, business data repository and electronic payment.
